

IN THE DRAWINGS

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. The Examiner stated that the cache memory reset must be shown or the feature removed from the claims. Applicant respectfully submits that the “feature” being claimed is a functional limitation stating how the memory is managed. This function might be implemented in hardware, software or firmware. As noted at p. 13, lines 25-27, the processor 518 or the data structure 500 may perform the resetting. Applicant respectfully requests clarification from the Examiner.
